SUMMARY

Full-stack developer with production experience across multi-cloud infrastructure VM migration pipelines spanning GCP, AWS, and DigitalOcean, AI-integrated web platforms, and secure authentication systems. Builds backend architecture in JavaScript and Python, responsive interfaces in React and Next.js, and integrates third-party APIs – with a consistent focus on shipping systems that hold up under real-world use, not just in a demo.

EDUCATION

- **Nirma University** Aug 2024 – May 2027
Bachelor of Technology in Computer Science and Engineering – CGPA: 8.20 / 10.0
Ahmedabad, India
- **Atmiya University** Sep 2021 – May 2024
Diploma in Computer Engineering – CGPA: 9.93 / 10.0
Rajkot, India

EXPERIENCE

- **STP Web Hosting** May 2026 – Jun 2026
Intern – Software Developer – Tech Stack: Python, Frappe, Node.js, MySQL
Rajkot, India
 - Contributed to **AltiShift**, a cross-cloud migration platform supporting VM transfers across **GCP, AWS, DigitalOcean, Virtuozzo, and CloudStack**.
 - Built an **automated migration pipeline** that transfers a client's VM to the destination cloud using only **source and destination API, access, and secret keys**.
 - Ensured the migrated VM replicates the source environment's configuration and runtime state with zero manual intervention.
- **InfiniteAI** Dec 2023 – Jan 2024
Web Development Intern – Tech Stack: HTML, CSS, JavaScript, PHP
Rajkot, India
 - Engineered a **full-stack job portal** with role-based client and administrator dashboards, streamlining posting and applicant-tracking workflows.
 - Implemented **OTP-based email verification**, cutting fraudulent sign-ups by **35%** and strengthening data integrity.
 - Refactored front-end and backend code, boosting **page load performance by 25%**.

PROJECTS

- **WriteVerse – Multi-Role Blogging Platform** Mar 2026 – Present [GitHub](#)
Tech Stack: Django, Python, SQLite3, Google Gemini API, Brevo SMTP
 - Architected a multi-role blogging platform with **Role-Based Access Control (RBAC)** across Admin, Manager, and Writer tiers, backed by a normalized **SQLite3** schema.
 - Integrated the **Google Gemini API** into a real-time moderation pipeline that auto-flags toxic comments before publication.
 - Built **OTP-based authentication** via Brevo SMTP, plus follow, bookmarking, and **AJAX-driven likes** to drive user engagement.
- **Draft AI – AI-Powered Email Assistant** Feb 2026 – Mar 2026 [Live](#) | [GitHub](#)
Tech Stack: Java, Spring Boot, React, Chrome Extension, Gemini API, Material UI
 - Built a **Chrome Extension (Manifest V3)** that injects an AI-generated “Smart Reply” button directly into Gmail via DOM manipulation.
 - Engineered a **non-blocking Spring Boot WebFlux** backend with a **RESTful API layer** for high-concurrency AI reply generation.
 - Designed a responsive React landing page with **Material UI**, featuring dynamic tone-selection for professional messaging.
- **Veil – Anonymous Messaging Platform** Oct 2025 – Dec 2025 [Live](#) | [GitHub](#)
Tech Stack: Next.js, Tailwind CSS, NextAuth, Zod, Resend, Gemini AI, MongoDB
 - Developed a full-stack **anonymous messaging application** on **Next.js**, enabling untraceable messages via shareable profile links, enhanced with **Google Gemini AI**-generated message suggestions.
 - Secured authentication and input validation using **NextAuth** and **Zod**, with automated **OTP verification via Resend**.
 - Persisted data in **MongoDB** with optimized indexing and built a fully responsive **Tailwind CSS** interface.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, PHP, SQL
- **Web Technologies:** HTML5, CSS3, React, Next.js, Express.js, Spring Boot, Django, Tailwind CSS
- **Databases & Tools:** MySQL, MongoDB, SQLite, Firebase, Git, GitHub, Postman, VS Code, Vercel
- **APIs & Concepts:** REST APIs, Google Gemini API, JWT Authentication, OTP-Based Verification, Chrome Extension (Manifest V3), OOP, Data Structures & Algorithms, RBAC, Agile Development
